used for assessing the behaviour and/or metabolism of a drug in another animal and which expresses a foreign polypeptide associated with drug behaviour and/or metabolism. The invention also comprises a nucleic acid construct for use in producing the above transgenic non-human animal and a method of assessing the metabolism and/or behavior of a drug in animal of interest, comprising administering test agent to the transgenic animal and conducting analytical tests to determine drug metabolism and/or behaviour. The transgenic animal is useful in studying construct is useful in producing the above transgenic animal and the methods are used for producing, the above transgenic animals construct is useful in producing the above transgenic animals of the invention are serum albumin; alpha-acidic glycoprotein; cytochrome P450 (CPT) utilizine diphosphoglucuronosyl transferase (UGT); multidrug resistance proteins and (MRP's). The present sequence represents a DNA sequence used to create a transgenic animal within the scope of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       diagnosing a disorder related to the presence of a molecular variant of a CYPSA5 or susceptibility to such a disorder, where the disorder is cancer, or diseases including cardiovascular diseases, diabetes and AIDS. The invention can further be used for the preparation of a diagnostic composition for diagnosing a disease in a subject having a genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a new CYP3A5 polynucleotide encoding a polypeptide, where the polynucleotide is capable of hybridising to a CYP3A5 gene. The invention is useful in an in vitro method for identifying a polymorphism. The invention is also useful for useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel CYP3A5 polynucleotide useful for diagnosis and treatment of cancer, cardiovascular diseases, diabetes and AIDS, and for identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, CYP3A5, polymorphism, cancer, cardiovascular disease, diabetes, AIDS, African American, forensic marker, pharmacological, cytostatic; antidiabetic; anti-HIV; gene therapy, ds.
(GST) M1 substrates which influence breast cancer treatments. They are
              also useful in diagnostic purposes to identify individuals having a polymorphic genotype which influence the outcome of breast cancer treatments and the selection of chemotherapeutic agents used to treat breast cancer. The polymorphisms detected are used to screen altered metabolism of CYD3A4, CYP3A5 or GSTM1 substrates, potential drug-drug interactions, drug adverse effects, likelihood of successful clinical outcome following treatment with anti-cancer agents such as cisplatin, cyclophosphamide and/or BCNU. The present sequence is human CYP3A5
                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                       .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            identifying a polymorphism. The invention is also useful for useful for diagnosing a disorder related to the presence of a molecular variant of a CYPSAS or susceptibility to such a disorder, where the disorder is cancer, or diseases including cardiovascular diseases, diabetes and AIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention can further be used for the preparation of a diagnostic composition for diagnosing a disease in a subject having a genome comprising a variant allele of the CYP3A5 gene, where the subject is an African American. The molecules of the invention are as forensic markers and in pharmacological studies. The present nucleic acid sequence represents a genomic DNA sequence that contains a region in which a polymorphism of the human CYP3A5 gene was detected.
                African American. The molecules of the invention are as forensic markers and in pharmacological studies. The present nucleic acid sequence represents a genomic DNA sequence that contains a region in which a polymorphism of the human CFPARS gene was detected.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a new CYP3A5 polynucleotide encoding a polypeptide, where the polynucleotide is capable of hybridising to a CYP3A5 gene. The invention is useful in an in vitro method for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel CYP3A5 polynucleotide useful for diagnosis and treatment of cancer, cardiovascular diseases, diabetes and AIDS, and for identifying
comprising a variant allele of the CYP3A5 gene, where the subject is an

The present invention relates to a new CYP3A5 polynucleotide encoding a polypeptide, where the polynucleotide is capable of hybridising to a CYP3A5 gene. The invention is useful in an in vitro method useful for identifying a polymorphism. The invention is also useful for useful for identifying a polymorphism. The invention is also useful for useful for diagnosing a disorder related to the presence of a molecular variant of a CYP3A5 or susceptibility to such a disorder, where the disorder is cancer, or diseases including cardiovascular diseases, diabetes and AIDS. The invention for diagnosing a disease in a subject having a genome composition for diagnosing a disease in a subject having a genome composition a variant allele of the CYP3A5 gene, where the subject is an African American. The molecules of the invention are as forensic markers and in pharmacological studies. The present nucleic acid sequence represents a genomic DNA sequence that contains a region in which a polymorphism of the human CYP3A5 gene was detected.
                                                                                                                       ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel CYP3A5 polynucleotide useful for diagnosis and treatment of cancer, cardiovascular diseases, diabetes and AIDS, and for identifying

The present invention relates to a new CYP3A5 polynucleotide encoding a polypeptide, where the polynucleotide is capable of hybridising to a CYP3A5 gene. The invention is useful in an in vitro method for identifying a polymorphism. The invention is also useful for useful for diagnosing a disorder related to the presence of a molecular variant of a CYP3A5 or susceptibility to such a disorder, where the disorder is cancer, or diseases including cardiovascular diseases, diabetes and AIDS. The invention can further be used for the preparation of a diagnostic composition for diagnosing a disease in a subject having a genome composition for diagnosing a disease in a subject having a genome composition and in pharmacological studies of the invention are as forensic markers and in pharmacological studies. The present nucleic acid sequence represents a genomic DNA sequence that contains a region in which a polymorphism of the human CYP3A5 gene was detected.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel CYP3A5 polynucleotide useful for diagnosis and treatment of cancer, cardiovascular diseases, diabetes and ALDS, and for identifying

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a new CYP3A5 polynucleotide encoding a polypeptide, where the polynucleotide is capable of hybridising to a CYP3A5 gene. The invention is useful in an in vitro method for identifying a polymorphism. The invention is also useful for useful for diagnosting a disorder related to the presence of a molecular variant of CYP3A5 or susceptibility to such a disorder, where the disorder is cancer, or diseases including cardiovascular diseases, diabetes and AIDS. The invention can further be used for the preparation of a diagnostic composition for diagnosing a disease in a subject having a genome comprising a variant allele of the CYP3A5 gene, where the subject is an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 African American. The molecules of the invention are as forensic markers and in pharmacological studies. The present nucleic acid sequence represents a genomic DNA sequence that contains a region in which a polymorphism of the human CPPASS gene was detected.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel CYP3A5 polynucleotide useful for diagnosis and treatment of cancer, cardiovascular diseases, diabetes and AIDS, and for identifying polymorphisms -

screened for the presence/absence of a polymorphic variant, preferably at positions -475 or -147 of the DNA of the 5' flanking region adjacent to the CYPAS coding sequence. The variants are present in an activator to the CYPAS coding sequence. The wariants are present in an activator protein-3 (AP-3) motif and/or a basic transcription element (BTE). The polymorphisms caused for the passor of the presence of variants can be used to identify subjects with a high or the presence of variants can be used to identify subjects with a high or low drug metabolizing phenotype associated with cytochrome CYPAS expression. Primers are used which in addition to hybridizing to the site of interest, are capable of introducing a restriction site which is absent in either the wild type sequence or polymorphic variants. Restriction enzyme cleavage analysis can then be used to indicate the presence or absence of the variant. The methods are used to establish, before treatment with a drug, whether the drug will be effectively metabolized by the patient, to identify compounds and transcription factors that can bind to a DNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /standard_name= "Single nucleotide polymorphism"

CYPRAS gene. The invention is useful in an in vitro method for dentifying a polymorphism. The invention is also useful for useful for diagnosing a disorder related to the presence of a molecular variant of a CYPRAS or susceptibility to such a disorder, where the disorder is cancer, or diseases including cardiovascular diseases, diabetes and AIDS. The invention can further be used for the preparation of a diagnostic composition for diagnosing a disease in a subject having a genome composition for diagnosing a disease in a subject having a genome composition for diagnosing of the CYPRAS gene, where the subject is an African American. The molecules of the invention are as forensic markers and in pharmacological studies. The present nucleic acid sequence represents a genomic DNA sequence that contains a region in which a polymorphism of the human CYPRAS gene was detected.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel CYP3A5 polynucleotide useful for diagnosis and treatment of cancer, cardiovascular diseases, diabetes and AIDS, and for identifying polymorphisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a new CYP3A5 polynucleotide encoding a

```
The present invention relates to a new CYP3AS polynucleotide encoding a polypeptide, where the polynucleotide is capable of hybridising to a CYP3AS gene. The invention is useful in an in vitro method for identifying a polymorphism. The invention is also useful for useful for diagnosing a disorder related to the presence of a molecular variant of a CYP3AS or susceptibility to such a disorder, where the disorder is cancer, or diseases including cardiovascular diseases, diabetes and AIDS. The invention can further be used for the preparation of a diagnostic composition for diagnosing a disease in a subject having a genome compersing a variant allele of the CYP3AS gene, where the subject is an African American. The molecules of the invention are as forensic markers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel CYP3A5 polynucleotide useful for diagnosis and treatment of cancer, cardiovascular diseases, diabetes and AIDS, and for identifying polymorphisms -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; CYP3A5; polymorphism; cancer; cardiovascular disease; diabetes;

The present nucleic acid sequence represents a genomic DNA sequence that contains a region in which a polymorphism of the human CYP3A5 gene was detected.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      81.2%; Score 27.6; DB 24; Length 621; llarity 88.2%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a new CYP3A5 polynucleotide encoding a polypeptide, where the polynucleotide is capable of hybridising to a identifying a polymorphism. The invention is also useful for useful for diagnosing a disorder related to the presence of a molecular variant of a CYP3A5 or susceptibility to such a disorder, where the disorder is cancer, or diseases including cardiovascular diseases, diabetes and AIDS. The invention can further be used for the preparation of a diagnostic composition for diagnosing a disease in a subject having a genome composition for diagnosing a disease in a subject having a genome composition for diagnosing a disease in a subject having a genome African American. The molecules of the invention are as forensic markers and in pharmacological studies. The present nucleic acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel CYP3A5 polynucleotide useful for diagnosis and treatment of cancer, cardiovascular diseases, diabetes and AIDS, and for identifying

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a new CYP3A5 polynucleotide encoding a polymeptide, where the polynucleotide is capable of hybridising to a CYP3A5 gene. The invention is useful in an in vitro method for identifying a polymorphism. The invention is also useful for useful for diagnosing a disorder related to the presence of a molecular variant of a capacity or susceptibility to such a disorder, where the disorder is cancer, or diseases including cardiovascular diseases, diabetes and AIDS. The invention can further be used for the preparation of a diagnostic composition for diagnosing a disease in a subject having a genome comprising a variant allele of the CYP3A5 gene, where the subject is an African American. The molecules of the invention are as forensic markers and in pharmacological studies. The present nucleic acid sequence represents a genomic DNA sequence that contains a region in which a polymorphism of the human CYP3A5 gene was detected.

The present invention relates to a new CYP3AS polynucleotide encoding a CYP3AS generate the polynucleotide is capable of hybridising to a CYP3AS gene. The invention is useful in an in vitro method for identifying a polymorphism. The invention is also useful for useful for diagnosing a disorder related to the presence of a molecular variant of a CYP3AS or susceptibility to such a disorder, where the disorder is cancer, or diseases including cardiovascular diseases, diabetes and AIDS. The invention for diagnosing a disease in a subject having a genome composition for diagnosing a disease in a subject having a genome composition for diagnosing a disease in a subject having a genome composition. The molecules of the invention are as forensic markers and in pharmacological studies. The present nucleic acid sequence represents a genomic DNA sequence that contains a region in which a polymorphism of the human CYP3AS gene was detected.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 3, Ap

Sequence 44, Application US/09144367

Patent No. 6432639

GENERAL INFORMATION:
APPLICANT: Lichter, Jay
APPLICANT: Lichter, Jay
APPLICANT: Guido, Marco
ITLE OF INVENTION: GENOTYPING OF HUMAN CYP3A4

FILE REPERBENCE: SEQ-129

CURRENT APPLICATION NUMBER: US/09/144,367

CURRENT PILING DATE: 1999-08-31

PRIOR FILING DATE: 1997-09-10

NUMBER OF SEQ ID NOS: 58

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 44

LENGTH: 19
                                                                                                                                                                                                         Sequence 3, Application US/09144367

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                  1: /SIDS1/gcgdata/geneseg/genesegn-embl/Na1980.DAT:*

The invention relates to a nucleic acid molecule comprising at least one base variation from human cytochrome P450 (CYP) 3A4 or CYP3A5 sequence.

Nucleic acid molecules of the invention are useful for identifying polymorphisms associated with CYP3A4, CYP3A5 or glutathione S-transferase (GST) MI substrates which influence breast cancer treatments. They are also useful in diagnostic purposes to identify individuals having a polymorphic genotype which influence the outcome of breast cancer treatments and the selection of chemotherapeutic agents used to treat breast cancer. The polymorphisms detected are used to screen altered metabolism of CYP3A4, CYP3A5 or GSTM1 substrates, potential drug-drug interactions, drug adverse effects, likelihood of successful clinical outcome following treatment with anti-cancer agents such as cisplatin, cyclophosphanide and/or BCMU. The present sequence is human CYP3A4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Hall J, Petros WP, Vredenburgh JJ, Colvin OM, Marks JR;

The invention relates to a nucleic acid molecule comprising at least one base variation from human cytochrome P450 (CTP) 3A4 or CTP3A5 sequence. Nucleic acid molecules of the invention are useful for identifying polymorphisms associated with CYP3A4, CYP3A5 or glutathione 5-transferase (GST) MI substrates which influence breast cancer treatments. They are also useful in diagnostic purposes to identify individuals having a polymorphic genotype which influence the outcome of breast cancer treatments and the selection of chemotherapeutic agents used to treat breast cancer. The polymorphisms detected are used to screen altered metabolism of CYP3A4, CYP3A5 or GSTMI substrates, potential drug-drug interactions, drug adverse effects, likelihood of successful clinical outcome following treatment with anti-cancer agents such as cisplatin, excloses the content of the present sequence is human promoter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents a PCR primer for the human CYP3A4 gene promoter. The invention relates to a CYP3A4 sequence polymorphism, which is part of a non-naturally occurring chromosome. Nucleic acids comprising the CYP3A4 polymorphic sequences can be used to screen patients for altered metabolism for CYP3A4 substrates, potential
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CYP3A4 gene polymorphism; polymorphic locus; human; altered metabolism; CYP3A4 substrate; drug-drug interaction identification; toxin exposure; genetic linkage detection; phenotypic variation; promoter; PCR primer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
associated with CYP3A4, CYP3A5 or GSTM1 substrates which influence breast cancer treatments, comprises at least one base variation from human CYP3A4 or CYP3A5 sequence -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

The CYP3A4 variant CYP3A4, a member of cytochrome P450 supergene family. The CYP3A4 variant is useful for identifying patients with heightened risk of developing or having prostate cancer and at risk for developing treatment-related leukemia upon administration of an epipodophyllotoxin. By identifying the CYP3A4 variant, a more effective anticancer treatment regimen can be selected. The present sequence represents the nucleic cacid sequence of the CYP3A4 variant CYP3A4-V. This variant comprises an A to G transition that alters the 10 basepair nifedipine-specific element located at -287 to -296 base pairs from the transcription start site of CYP3A4.
              result from environmental or occupational exposure to toxins. They can also be used to establish animal, cell culture and in vitro cell-free models for drug metabolism. Polymorphic CVP3A4 gene sequences can be used for expression studies to determine the effect of promoter and/or intron sequence variations on mRNA expression and stability. The polymorphisms are also used as single nucleotide polymorphisms to detect genetic linkage to phenotypic variation in activity and expression of CYP3A4. The nucleic acids can also be used to generate genetically modified non-human animals or site specific gene modifications in cell lines.
  drug-drug interactions, and adverse/side effects as well as diseases that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acid sequence encoding a variant of CYP3A4, involved in the metabolism of aflatoxin B1 and drugs, useful for identifying patients with increased risk of developing or having prostate cancer

The invention also comprises a nucleic construct for use in producing the above transgenic non-human animal and an animal of interest, comprising and/or behavior of a drug in transgenic animal and conducting analytical tests to determine drug metabolism and/or behaviour. The transgenic animal is studying drug metabolism and/or behaviour in other animals. The nucleic acid drug metabolism and/or behaviour in other animals. The nucleic acid construct is useful in producing the above transgenic animal and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; ss; transgenic; drug metabolism; behaviour; gene; mouse; pharmacokinetic assay; planmacodynamic assay; toxicology; serum albumin; alpha-acidic glycoprotein; CYP; multidrug resistance protein; MRP; uridine diphosphoglucuronosyl, transferase; UGT; cytochrome P450.
                                                                                                                     that encodes a butenyl-spinosyn biosynthetic enzyme, a butenyl-spinosyn PKS (Polyketide synthetase) domain, or a spinosyn PKS module. The butenyl-spinosyn biosynthetic genes are useful for increasing the production of butenyl-spinosyn insecticidal macrolides. The genes also useful for changing the metabolites or products produced by spinosyn-producing microcapanisms. The present sequence represents a DNA molecule encoding butenyl-spinosyn biosynthetic enzymes.
                                                                                                  The invention relates to a novel DNA molecule comprising a DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New transgenic non-human animal expressing a foreign polypeptide associated with drug behavior and/or metabolism, useful for studying the behavior and/or metabolism of a drug in other animals -

methods are used for producing, breeding and using transgenic animals for pharmacological (e.g. pharmacokinetic or pharmacokine assays) and/or toxicological studies. Nucleic acid sequences used within the invention are serum albumin; alpha-acidic glycoprotein; cytochrome P450 (CPP); uridine diphosphoglucuronosyl transferase (UGP); multidrug resistance proteins and (MRP's). The present sequence represents and consider a transgenic animal within the scope of the
                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /standard_name= "Single nucleotide polymorphism"

The present sequence is a gene fragment for human Canlon, a novel schizophrenia-related voltage-gated ion channel protein. Canlon and its coding sequence are useful in the treatment of schizophrenia, bipolar disorder, or other central nervous system (CNS) conditions, as well as other conditions such as heart conditions and hypertension. Compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel schizophrenia-related voltage-gated ion channel polypeptide and dynucleotide useful for identifying modulators and for diagnosing, treating schizophrenia, bipolar disorder or central nervous system disorders

```
This sequence represents the human CYP3A4 gene promoter.
The invention relates to a CYP3A4 sequence polymorphism,
which is part of a non-naturally occurring chromosome. Nucleic acids
comprising the CYP3A4 polymorphic sequences can be used to screen
patients for altered metabolism for CYP3A4 substrates, potential
drug-drug interactions, and adverse/side effects as well as diseases that
result from environmental or occupational exposure to toxins. They can
also be used to establish animal, cell culture and in vitro cell-free
models for drug metabolism. Polymorphic CYP3A4 gene sequences can be used
for expression studies to determine the effect of promoter and/or intron
sequence variations on mRNA expression and stability. The polymorphisms
are also used as single nuclectide polymorphisms to detect genetic
linkage to phenotypic variation in activity and expression of CYP3A4. The
nucleic acids can also be used to generate genetically modified non-human
and an also be used to generate genetically modified non-human
and also be used to see to
                                                                                                                                                                                                                                                                                                                ö
                       conditions, preferably schizophrenia or bipolar disorder, and also including pain disorders, epilepsy and various cardiovascular disorders such as heart arrhythmias, angina and hypertension. The Canlon gene is located on chromosome 13q. The present sequence comprises a genomic sequence of Canlon, comprising exons 8 to 27.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CYP3A4 gene polymorphism; polymorphic locus; human; altered metabolism; CYP3A4 substrate; drug-drug interaction identification; toxin exposure; genetic linkage detection; phenotypic variation; promoter; ss.

The RR primers are useful for amplifying the CYP sequences and the oligonucleotides are useful for amplifying SNPs in the 5'-flanking regions of the CYP3A4 or CYP2C9 genes. The present sequence represents the 5'-flanking regions of the CYP3A4 or CYP2C9 genes. The
                                                                                                                                                                                                                                                                                                                                                                     Novel primer pairs and sequence determination oligonucleotides useful for amplifying and detecting novel single nucleotide polymorphisms in the 5'-flanking regions of cytochrome p450 (CYP)3A4 and CYP2C9 genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                              The present sequence represents a nucleic acid molecule which encodes a secreted human protein. The gene number and the clone it was derived from are given in the descriptor line.

The invention relates to 31 novel genes and their fragments (nucleic acid sequences: AAA61260-A61293; amino acid sequences AAB12301-B12371) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the amount of the new polypeptides in a pyrucleotides, based on which tissues they are most highly expressed in nolude products for the diagnosis or treatment of cancer, tumours, and include products for the diagnosis or treatment of cancer, tumours, bacterial and fungal infection. The genes are used to generate fusion continues by linking to the gene a human immunoglobulin portion (AAA61251) for increasing stability of the fused protein as compared to the

This sequence represents a CYP3A4 sequence polymorphism of the invention, which is part of a non-naturally occurring chromosome. Nucleic acids comprising the CYP3A4 polymorphic sequences can be used to screen patients for altered metabolism for CYP3A4 substrates, potential drug-drug interactions, and adverse/side effects as well as diseases that result from environmental or occupational exposure to toxins. They can also be used to establish animal, cell culture and in vitro cell-free models for drug metabolism. Polymorphic CYP3A4 gene sequences can be used for expression studies to determine the effect of promoters and/or intron sequence variations on mRNA expression and stability. The polymorphisms are also used as single nucleotide polymorphisms to detect genetic linkage to phenotypic variation in activity and expression of CYP3A4. The nucleic acids can also be used to generate genetically modified non-human animals or site specific gene modifications in cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; single nucleotide polymorphism; SNP; cytochrome p450; CYP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to nucleic acid sequences (ABG67188-ABG71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be
                                                                                                                                                                                                                                                                                                                    The present invention relates to PCR primer pairs for amplifying and sequence determination oligonucleotides for detecting single nucleotide polymorphisms (SNPS) in the 5'-flanking regions of human eytochrome p450 (OYP) genes encoding CYP3A4 or CYP2A9. The SNPS correspond to position 461 of a defined 1345 base pair sequence for CYP2A9 and PS7, 1049, 1164, 1164, 1556, 1661 and 162 of a 4348 base pair sequence for CYP2A9. The PCR primers are useful for amplifying the CYP sequences and the oligonucleotides are useful for detecting
                                                                       Novel primer pairs and sequence determination oligonucleotides useful for amplifying and detecting novel single nucleotide polymorphisms in the 5' flanking regions of cytochrome p450 (CYF)3A4 and CYP2C9 genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New genomic sequences from Listeria species, useful for detection, treatment and prevention of infection, also related polypeptides, antibodies and modulators
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SNPs in the 5'-flanking regions of the CYP3A4 or CYP2C9 genes. ABK68747-ABK68750 represent previously published oligonucleotides

This invention describes the isolation of a novel human aminopeptidase P (AmP). This protein is used to produce recombinant AmP and can be used for gene therapy for treating AmP-deficiency conditions. Its fragments are used as primers and probes to identify patients with homozygous and heterozygous AmP deficiency, including prenatal diagnosis (patients defective in AmP are at risk of developing angiodema if treated with angiotensin-converting enzyme inhibitors), also as antisense inhibitors in cases of excessive AmP expression. The product of the invention is also used to identify AmP-expression. The product of the invention is also used to identify AmP-expression sequences in other animals and to generate transgenic animals, and comparisons of genomic sequences are used to detect mutations. AmP inhibitors are potentially useful as antihypertensive agents and to prevent or treat arterial (re)stenosis antihypertasis. The structure of AmP is used to design synthetic substrates, e.g. for use in AmP assays. AmP, which hydrolyzes N-terminal imple bonds, can be used to degrade industrial protein feeds to free formulations used to treat malabsorption syndrome and for studying its biological role. Antibodies against AmP are used in immunohistochemical methods to study AmP distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          prenatal diagnosis; angioedema; antihypertensive agent; atherosclerosis; arterial stenosis; industrial protein feed; malabsorption syndrome; proteinaceous waste degradation; additive; immunohistochemistry; ss.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/the tissue was harvested in spring and summer from branches
of seed orchard trees which are clones of the same
genotype. Branches were 4-6 inches in diameter. The cDNAs
were directionally cloned into Lambda Zap and were
rescued as a Bluescript derivative in the EcoRI and XhoI
sites.

It currently consists of 8 configs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequence data in this record represents an 'enhanced' version of a phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8% average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             consists of 4 contigs. Gaps between the contigs.

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* 197908: contig of 97908 bp in length

* 97909 98009 141249: contig of 43241 bp in length

* 141250 141349: gap of unknown length

* 141350 168491: contig of 27142 bp in length

* 168492 168591: gap of unknown length

* 168492 168591: gap of unknown length

* 168592 178877: contig of 10266 bp in length.

It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of M. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Web site: http://www-seq.wi.mit.edu
